# LOW CODE & BPM PLATFORM

An intelligent business process management (BPM) and low-code platform that enables midsize and large enterprises to accelerate business processes of any complexity and easily build applications for their specific business needs. This Low-code & BPM Platform provides out-of-the-box solutions and templates to accelerate business growth and win the battle for a digitally native customer.

KEY BENEFITS

- **Intelligence:** Implement intelligent technologies that help users accelerate routine operations.

- **Out-of-the-box:** Exploit preconfigured solutions for marketing, sales and service to accelerate desired business results.

- **Low-code:** Effortlessly build custom apps with its low-code development capabilities.

KEY FEATURES

Business Process Management: Automate any internal processes – from document approval to collaboration on complex projects involving multiple teams. This platform provides a complete set of tools to effectively manage business processes, including process modelling, execution, monitoring and analysis.

Case Management: Low-code & BPM Platform enables its users to take advantage of Dynamic Case Management (DCM) to more flexibly manage unstructured processes. DCM offers adaptable, context-based patterns that enable users to dynamically select the best path and set of activities to achieve more successful, optimized outcomes.

System Designer: It allows users to jump start using the system while providing unlimited possibilities for application customization. With this platform, users can customize almost everything in the system – from section structure and business logics to system look according to the corporate branding.

Core Configuration: Off-the-shelf tools allow you to solve various business tasks – from managing employee profiles to streamlining omnichannel communications with your clients.

Mobile Application: This platform also has a mobile app can be used as a remote workplace with instant access to customer data, calendar, mobile feed, dashboards and analytics.

Security and administration: Low-code & BPM Platform ensures data protection and multilevel security from unauthorized access. Therefore, this platform ensures an exceptional level of application security and stability.
